EDUCATION

Ain Shams University

B.S. in Computer Science | GPA: 3.4

Expected Jul 2027

Cairo, Egypt

ACHIEVEMENTS

5th Place — Game Development Contest

2024

- Led a team in a college-wide game development competition focused on building games using C++ and SFML.
- Achieved 5th place among participating teams during the first year of Computer Science studies.

PROJECTS

After-World-War | C++, TCP Sockets, Multithreading, Linux

Mar 2026

- Developed a concurrent real-time chat application using raw TCP sockets and multithreaded client handling.
- Designed a server architecture capable of supporting multiple simultaneous client connections and group communication.
- Implemented synchronization mechanisms to ensure thread-safe message broadcasting between connected users.
- Built low-level networking logic for socket creation, connection management, and message transmission.

LMS For Tutors | Node.js, Express.js, Redis, MongoDB, REST APIs

Aug 2025

- Designed and developed a scalable learning management platform for tutors to manage students, assignments, and communication workflows.
- Built RESTful APIs for authentication, assignment handling, and user management.
- Integrated Redis caching to reduce redundant database queries and improve API response performance.
- Structured backend services using modular architecture principles for maintainability and scalability.

Movie App | MongoDB, Express.js, Angular, Node.js

Aug 2025

- Developed a full-stack movie platform using the MEAN stack with dynamic frontend rendering and backend API integration.
- Designed RESTful APIs for movie management, search functionality, and data retrieval.
- Implemented MongoDB persistence for efficient storage and querying of movie data.
- Built responsive Angular components to handle asynchronous API communication and frontend rendering.

PhraseVault | Next.js, TypeScript, Serverless Functions

Jul 2025

- Developed a web application for organizing and practicing idioms, phrasal verbs, and frequently used English expressions.
- Implemented serverless backend functions for scalable and lightweight data handling.
- Designed reusable frontend components using modern React and Next.js patterns.
- Focused on seamless navigation and fast content retrieval for improved user experience.

FlappyBird (Born Again Edition) | C++, SFML

May 2024

- Developed an enhanced multiplayer Flappy Bird game for a college game development competition using C++ and SFML.
- Implemented collision detection, physics handling, and responsive player controls.
- Built rendering and game loop systems using SFML for smooth gameplay performance.
- Designed modular game components to simplify feature expansion and maintenance.

TECHNICAL SKILLS

Languages: C, C++, Go, Java, JavaScript, TypeScript, Python, SQL, HTML/CSS

Frameworks & Libraries: Node.js, Express.js, React, Next.js, Angular, Qt, SFML

Databases: PostgreSQL, MongoDB, SQLite, Redis

Developer Tools: Git, GitHub, Linux, Bash, VS Code, Neovim

Core Concepts: Data Structures & Algorithms, Backend Development, REST APIs, Networking, Concurrency, System Design

TECHNICAL INTERESTS

Distributed Systems, Backend Engineering, Linux Internals, Low-Level Programming, Networking, Performance Optimization
